What is an event?

An event allows you to get specific input about a procedure from the operator, for example by requiring a barcode scan. Events can also be used to personalize messages that will request some action from the operator during the procedure.

The types of Events available at TOMEs are:

- Request the capture of information with a barcode scan
- Request the capture of some information by selecting a button on the Trima Accel screen
- Provide information or instructions to the operator
- Provide a timer for the operator to perform some activity

How do you want Trima Accel to help you?

Require information via barcode

What is the name of this event?

Provide a description of this event
