Create a new event

What is an event?

Events allow you to give specific input about the process, for instance, via barcodes. Events can be used to personalize messages that will request some action from the operator during the procedure.

The types of Events available in TOMEs are:

- Request the capture of information with a barcode scan
- Request the capture of some information by selecting a button on the Trima screen
- Provide some information/guidance to the operator
- Provide a timer for the operator to perform some activity

How do you want Trima to help you?

Request information via barcode

What is the name of this event?

Provide a description of this event
